Blockchain Technology Assignment 2

CSE4444

Student details

Shreyan Raghuvanshi

Registration number: 230905247

Developed DApp

Campus Council Vote

A decentralized campus election application using Solidity, Ethereum, and a web interface integrated with MetaMask. The contract supports candidate registration, administrator-controlled voting periods, one vote per wallet, and retrieval of election results.

GitHub repository

https://github.com/gingerale911/CampusVotingDApp

The repository contains the smart contract, HTML CSS and JavaScript frontend, execution instructions, deployment configuration, automated contract tests and results, and the supporting evidence supplied with the project.

Submission overview

The customized interface uses a green campus-council theme and a three-step voting guide. The example candidates are Obijit Singh and Safin Joash. Candidate records and vote totals are retrieved from the deployed smart contract.
